Week 6 Exercise: Bivariate Maps

Young Adults and Home Ownership, 2010
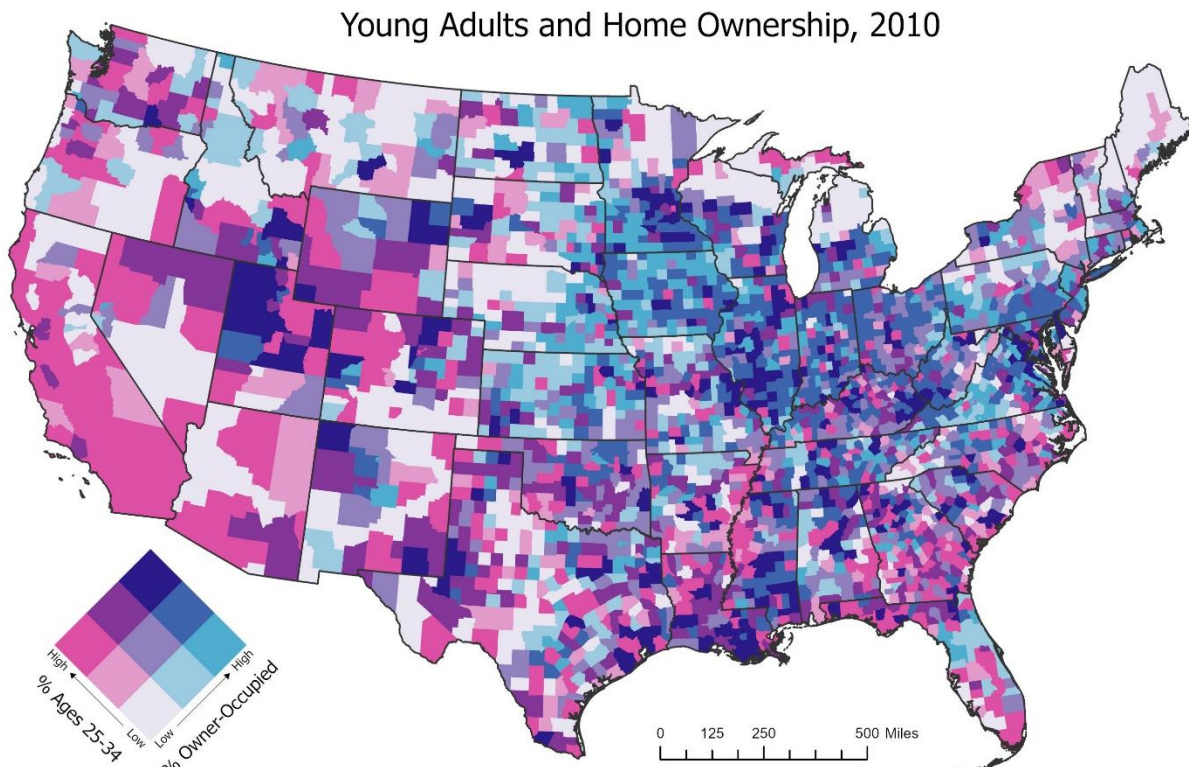

I compared the percentage of young adults (ages 25-34) and the percentage of housing units that were owner-occupied. There appears to be a clear relationship between age and home ownership by region of the country, which is what I expected to see. California and other western states have high young adult populations but relatively low home ownership rates, while midwestern states have varying young adult populations but relatively high home ownership rates.
